

# 2018 *Creative* STORAGE<sup>SM</sup> CONFERENCE

June 7th 2018 at the DoubleTree Hotel, Culver City, California

AN ENTERTAINMENT STORAGE ALLIANCE™ EVENT

**Sumit Puri, CEO, Liquid**

**TITLE: Accelerating the digital content production pipeline with composable infrastructure**

## **ABSTRACT**

Graphics processing. Compute. Storage. Networking. For the first time, composable infrastructure architectures allow users to disaggregate, pool and orchestrate these data center resources on-demand at the bare metal level. Add discrete disaggregated elements at will, not at the mercy of traditional IT vendors or cloud service providers. IT users can now right-size, scale and share idle resources across network fabric to approach full utilization. With composable solutions, it is now possible to design a living infrastructure that can adapt as needed to meet the massive data requirements associated with live broadcast; rendering and editing; real-time VR and SFX content creation; content distribution; and other AI-driven, next gen applications in the media and entertainment space.

Attendees will learn more about how composable infrastructure architectures work and the application of composable in high-value content and broadcast M&E environments.

## **BIOGRAPHY**

Sumit Puri is a storage industry veteran with over 20 years of experience. Sumit has been focused on defining the technology roadmaps for key industry leaders including SandForce, LSI, and Toshiba. Sumit has a long history with bringing successful products to market with numerous teams and large-scale organizations.
